Saviynt

SOLUTION GUIDE Saviynt Identity Security Posture Management (ISPM)

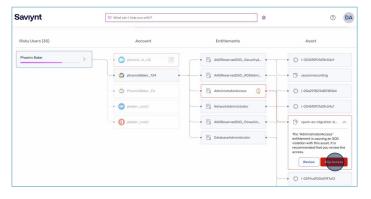

Reimagine and reinvent your identity security

Enhance your identity security with Al-powered ISPM. Built on Zero Trust principles. Saviynt ISPM fortifies identity data hygiene, prioritizes remediation, and minimizes manual effort to effectively reduce your attack surface. Maximize your identity security investments and boost productivity with actionable insights and automation. Stay ahead of threats, improve compliance, cut costs, and prevent identity risks from becoming incidents.

Elevate Your Identity Security Posture with Discovery and Visibility of Identity **Risks**

Saviynt ISPM discovers all identities, access, and assets for a comprehensive and centralized identity data inventory, to help you gain a complete understanding of your data, access, and governance postures. With deep correlation between identities, access, and resources, you can proactively eliminate risky access and prioritize remediation of identity and access risk.

Enhance Data Hygiene and Your Governance Controls Effectiveness

Auto generation of role and entitlement descriptions that are present, clear and accurate, helps streamline processes and enables precise access provisioning and enforcement of least privilege principles. Further accelerate remediation by automatically adjusting access and policy confirmations and controls as your organization evolves. Align access and permissions with compliance requirements to help avoid costly penalties and protect your brand's reputation.

assets

Posture Management (ISPM):

- Prioritize remediation of identity and access risks
- Enhance your data hygiene and increase governance control effectiveness
- Maintain continuous compliance before, during and after audits
- Eliminate the need for business intelligence tools and technical resources

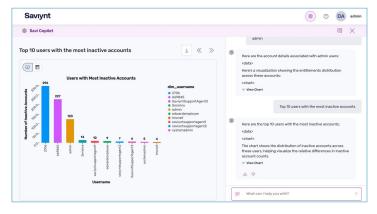

Access paths let you quickly identify and stop problematic access sources such as SOD violations

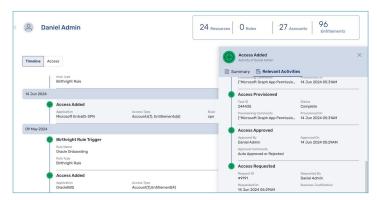

Quickly identify how your governance controls are performing and adjust as your organization evolves.

Reduce your Audit Findings with Improved Preparedness and Evidence Collection

Maintaining continuous compliance before, during, and after audits is critical in today's regulatory environment. Saviynt ISPM lets you start your audit preparation with confidence with self-serviceability and timeline views that highlight any, and every, change, whether attribute changes, or access assignments. Shortening evidence collection and being able to prove continuous compliance saves costs associated throughout the audit process and reduces the likelihood of negative findings leading to fines and loss of brand reputation.

Enable non-technical users with the ability to quickly and easily create reports without the need for technical resources.

Complete historical timelines track every access change made to an identity to help prove continuous compliance.

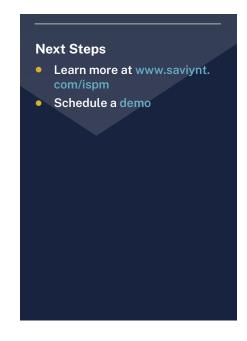

Enable Business Users to Unlock the Power of Data with Savi Copilot

Savi Copilot is Saviynt's natural language process interface that empowers business users and analysts to quickly create dashboards that drill down into the data needed to easily identify problematic trends or generate reports showing program effectiveness. It removes the need for business intelligence tools or technical resources to pull data, write queries or develop APIs to analyze information. Streamline investigations so your analysts can focus on preventative risk identification and ensure a stronger security posture for your organization.

Identity Security Posture Management is a core component of the Saviynt Identity Cloud

The Identity Cloud

ABOUT SAVIYNT

Saviynt's Identity Cloud is the leading identity governance platform.
