

Saviynt Intelligence

Superior Security. Increased Productivity. Improved Compliance. Reduced Risk.

The Saviynt Intelligence Suite leverages the industry's most innovative artificial intelligence and machine learning (AI/ML) capabilities to power and protect customers throughout the world. Transform operational processes into proactive, automated programs that eliminate manual processes and guesswork to gain an unparalleled understanding of your security posture through streamlined processes that enable all users, increase productivity, and improve compliance.

Intelligent Recommendations

Eliminate guesswork and reduce decision fatigue throughout your identity security program. With a state of the art intelligence engine ingesting peer access and internal risk signals, Saviynt unlocks precise and accurate recommendations for access requests and certifications, as well as improving role and rule access modeling. The intelligence engine empowers organizations to continuously improve identity data hygiene. Reduce overprovisioning and improve request fulfillment by up to 60%*, and better manage duplicate identities to maintain a clean identity warehouse and enable "one identity for life".

Comprehensive Confidence Scoring

More accurate scores help users make more confident decisions. To do so, Saviynt normalizes risk signals, creating a single weighted score to simplify decision making. Flexible

configuration and management lets you easily adjust signal weighting per security and governance policies, while scoring thresholds enable autonomous decision-making. And being able to easily showcase calculations expedites internal and external audits.

An Intelligent Copilot for Interactive Support

Saviynt's natural language copilot assists all users by providing a more intuitive, conversational, and meaningful experience. Users are better able to understand what access to request and approve. Onboarding administrators gain a better understanding of how to integrate apps, while security analysts can easily build and deliver detailed reports. Simply ask Saviynt a question to get quick guidance or information regarding historical trends, likely outcomes, and additional details concerning your identity security program.

Empower your identity security program with

- The most accurate risk-based decision making
- Dynamic peer groups for access management
- Hands-free entitlement identification detection and usage

Analysis of 14+ internal risk signals helps clarify why actions should or should not be taken

Accurate access recommendation predictions (applications, roles, entitlements) of up to 95%

Set risk scoring thresholds to automate decision making and maximize risk postures

Shrink certification fatigue and increase revocation rates on sensitive and outlier access by up to 75%*

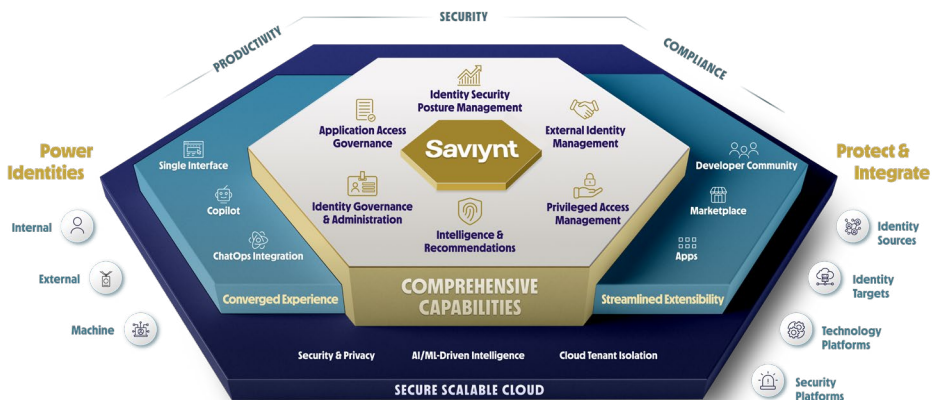

Reduce help desk requests for missing and incorrect configurations, attribute mapping, and "how-to" questions, and boost productivity

Intelligent Identity Security Posture Management (ISPM)

As threats from malicious actors increase, knowing your exact identity security posture is imperative. Saviynt ISPM delivers actionable insights on identity-related risks to identify vulnerabilities and aid remediation while helping to limit the blast radius of any incident. Enhance data hygiene by reducing duplicates and enrich entitlement descriptions for clarity. Leverage a copilot that provides more intuitive system interactions for proactive threat hunting.

The Identity Cloud combines core identity security capabilities in a single platform that enhances security while reducing costs and management headaches.

THE IDENTITY CLOUD

Saviynt Intelligence Includes:

- Intelligent Recommendations
- Copilots
- Identity Security Posture Management (ISPM)
- Identity Threat Detection and Response (ITDR)**

*Statistics based on customer test data and internal Saviynt projections

ABOUT SAVIYNT

Saviynt's Identity Cloud is the leading identity governance platform. It helps enterprise customers accelerate modern cloud initiatives and solve the toughest security and compliance challenges in record time. Saviynt converges IGA, granular application access, cloud security, and privileged access into the industry's only enterprise-grade SaaS solution.

One Converged Platform. Complete Control.

- See everything. Control everything.
- Simple to use. Fast to deploy.
- Detect earlier. Respond smarter.
- Lower cost. Transform ROI.
