

# Duplicate Identity Management with Saviynt Identity Cloud

Create a single, authoritative identity record and prevent new duplicates from being created.

The number of identities security teams need to manage continues to grow as organizations embrace the cloud, increase their use of third parties and contractors, and adopt new technologies such as IoT and IIoT.

With more and more identities cycling through environments, organizations need better visibility and insights into which identities have access to what and the activity associated with that access. Existing disparate authoritative sources of data and processes complicate an already complicated task, increasing the threat landscape.

Saviynt Duplicate Identity Management helps manage the ever-changing identity landscape. With it, organizations can automatically recognize possible duplicate identities and escalate them for review, or automatically merge them based on criteria contained within the records.

Merging identities into a single, authoritative record helps identify and reduce excessive privileges that would otherwise go undetected and prevent the creation of toxic Separation of Duty (SoD) combinations to maintain continuous regulatory compliance. Duplicate Identity Management detects duplicates across the most complicated hybrid and multi-cloud environments, presenting a clear view of an organization's risk landscape and preventing situations that may entice fraud or other malicious activity.

In addition to managing existing identities, Duplicate Identity Management identifies clones during the import process, preventing duplicates from even being created. You can escalate potential duplicates for review for a side-by-side comparison or automatically merge records based on information found within multiple records.

Manage a clean identity warehouse

Reduce the attack surface

Maintain compliance

Effectively manage merger, acquisition, and divestiture related identities

Prevent SOD violations

## Match and Merge

**Duplicate Identity Management**  
Click on the primary record to view the corresponding duplicate identities and click on Analyze to view more details.

**Primary Identity:** Amanda Baker (FA-Administration)

**Potential Duplicate:** Amanda Baker (ama.baker) - 2 Accounts, 0 Roles

Similarity Score is 100% and it is calculated based on attribute(s) - firstname, lastname

**Merge Duplicates** - Final Preview

A preview of the final attribute values of the primer identity after merge are shown below

Identity Attributes			
COUNTRY	REGION CODE	CITY	CUSTOM PROPERTY 1
USA	94111	San Francisco	70ca99b698-4479599ca03263425161
CUSTOM PROPERTY 30	CUSTOM PROPERTY 16	PHONE NUMBER	CREATE DATE
San_Francisco_site	Baker	2117	2021-12-06 12:18:58
JOB CODE	LOCATION DESC	START DATE	TITLE
38410	334.4	2000-01-01 00:00:00	Facilities Administrator
EMPLOYEE ID	CUSTOM PROPERTY 35	CUSTOM PROPERTY 19	UPDATED DATE
2117	21175	FA-Administration	2021-12-06 12:18:58

**Quick Summary:** 39 Uncommon Attributes

**Merge updates:** Once you click on confirm, duplicate identity will get deprovisioned.

Saviynt's duplicate identity workbench provides an efficient user interface to identify conflicts, create user update rules to deprovision accounts, and transfer ownership of service accounts to the primary identity that acts as the enterprise's authoritative identity source. If you choose not to automate remediation, the workbench lets you easily compare identities side-by-side and select what information to update or transfer to a combined record.

Duplicate Identity Management is especially powerful for highly dispersed organizations (those with many subsidiaries, divisions, or locations), those that leverage a number of third parties or temporary staff, those that experience a high degree of merger, acquisition and divestiture activity, or organizations where there is a lot of identity movement such as hospitals and educational institutions.
