

## External Identity Governance for Healthcare Providers

Streamline identity governance of vendors, contractors, and other third-party identities.

Digitalization and changing business relationships have created a highly complex, intertwined, and almost impossible-to-manage labyrinth of internal and external human and machine identities, constantly coming, going, and ever evolving. From private clinics that license access to your EHR, to medical and nursing students, vendors, and other third parties, security teams must manage the identities of an ever-increasing number of external personnel.

Integrate third-party access governance with your identity program with Saviynt Identity Cloud to better govern all identities. Saviynt Identity Cloud allows hospital systems to modernize their identity program and remove barriers to patient care delivery with frictionless user access, simplified administration, and access controls within a single converged framework that centralizes human and machine identity governance.

Third-party governance features provide industry-leading management of external identities throughout the engagement lifecycle to provide:

- Complete visibility into vendor risk
- Accelerated onboarding and reduced costs
- Vendor account lifecycle management

- Configurable policies for access requests
- Auto-remediation for non-compliant accounts

Saviynt Identity Cloud mitigates security risks caused by external identities throughout a provider's environment, enforcing access controls that can be configured specifically for each managed identity source. This allows for streamlined onboarding along with the flexibility to enforce appropriate access policies based on external use cases and risks.

We integrate with leading system of record (SoR) solutions and many of the leading IDaaS solutions. Self-service user onboarding increases end-user productivity while decreasing workloads on the central user access administration team.

### Empower the Workforce

Quickly, accurately, and securely provide access for all external third party identities you are managing in your environment.

### Improve Operational Efficiency

Reduce application onboarding and access certification times by up to 70%, respectively

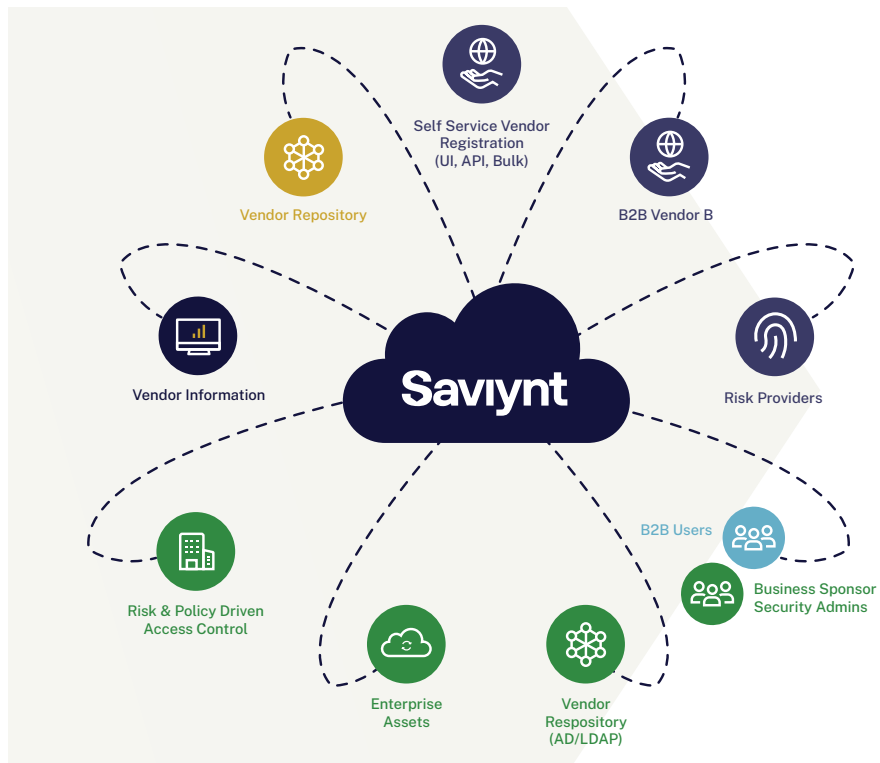

### Protect Patient and Organizational Data

Gain insights and govern your identity environment in accordance with identified risks

### Enable Compliance and Zero Trust

Deliver continuous regulatory compliance and robust reporting for audits

Saviynt Identity Cloud delivers features in four key areas of access governance:

### Lifecycle Management Onboarding

- Multiple onboarding gateways –UI, API, bulk, personalized registration forms
- Validation framework
- Easily configured business approval flow
- Lifecycle rule triggers
- Organizational hierarchy
- Multiple authentication providers

### Third Party/Affiliate User Onboarding

- Sponsor initiated invitations
- Self-service registration
- Support for update, re-hire, transfer, and leaver scenarios
- Consent form
- 3rd party integration with identity proofers
- Built-in and custom validation personal registration forms

### Ongoing Governance

- Delegated administration and ownership
- Security policy management
- Access recertification
- Risk provider integration
- Credentialing app integration

### Termination

- M&A scenarios for organization hierarchies
- Cascade terminations to identity and access
- Succession management
