

Saviynt Identity Cloud

Security's Most Powerful Converged
Identity Platform (CIP)

The most feature-rich solution for advanced identity security, Saviynt Identity Cloud merges five core identity security capabilities onto a single platform, allowing administrators and users to better govern and manage the ever-increasing number of identities across on-premises, cloud, and hybrid environments.

No matter where you are on your identity journey, Saviynt Identity Cloud helps modernize your security program and protect sensitive and privileged access for every identity – human and machine – within or beyond your enterprise.

Consolidate Core Identity Security Functions

Unify capabilities for IGA, PAM, and third-party, application and data access governance using the same management console, processes, and design characteristics to simplify management and enhance the user experience with powerful identity security features.

Manage and Govern All Identities, Applications, and Workloads

With a 360-degree view of your entire identity landscape, you can manage all identities across your environment whether on-premises, multi-cloud, or hybrid.

Unify administration by bringing together intelligence, reporting, and dashboarding. Understand your identity program's overall health with actionable reporting against key performance indicators including service health, configurations, and compliance.

Speed Deployment and Simplify Management

Reduce application onboarding times up to 70% by using an extensive set of pre-built templates, robust control library, and intuitive wizard.

Instantly connect cloud platforms, enterprise applications, databases and directories, cloud storage, and more to accelerate implementation timelines with pre-built and out-of-the-box integrations via [Saviynt Exchange](#). With hundreds of certified integrations developed by Saviynt and our partners, you can quickly add applications, significantly reducing the effort required to onboard and ingest usage and risk signals from critical enterprise applications.

UNIFY CORE IDENTITY SECURITY CAPABILITIES

-  Identity governance and administration (IGA)
-  Privileged access management (PAM)
-  External Identity & Risk Management
-  Application access governance (AAG/GRC)

Save costs associated with implementing and managing identity security to lower TCO and increase ROI

Streamline processes and speed application and identity provisioning and onboarding

Enable end-users with self-service features

Comply with relevant regulations and shorten audit timelines continuously.

Eliminate silos with a security program that adapts and grows with you

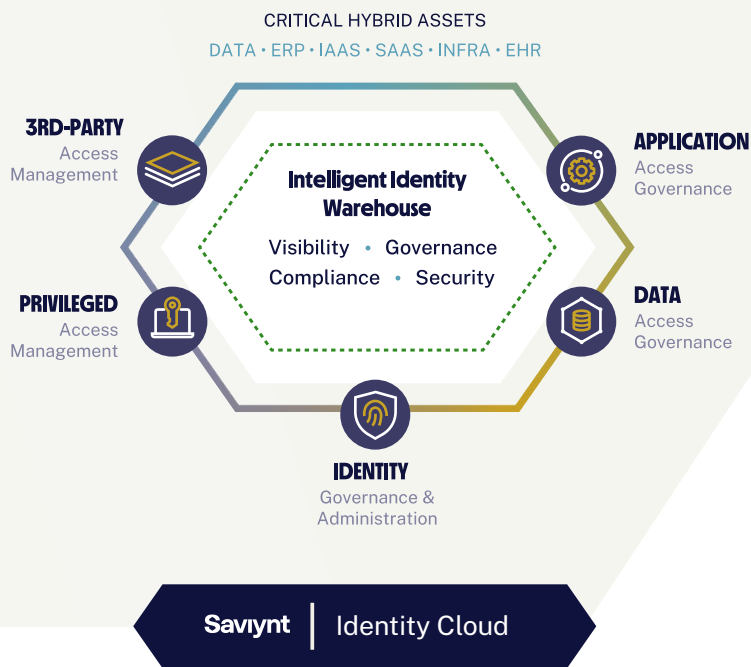

Bring-Your-Own (BYO) capabilities for existing workflows, security keys, vaults, forms, and more let you leverage previous investments and provide a continuous user experience.

Remove administrators from daily, routine, and low-level activities to let them focus on higher value activities through automation. Speed decision making and certification campaigns while reducing digital fatigue with access, role, and other recommendations.

Reduce Risk with Actionable Insights and Intelligence

Saviynt's powerful identity warehouse centralizes all identities and eliminates security silos to make accurate, risk-based decisions. The warehouse ingests, contextualizes, and exchanges risk data across GRC and risk platforms, including CASB, SIEM, UEBA, and vulnerability management tools to unify and examine risk across users, access, compliance, activity, and endpoints.

Saviynt Identity Cloud combines core identity security capabilities in a single platform that enhances security while reducing costs and management headaches.

Frictionless Access

- Just-in-time access
- Access from anywhere (mobile, browser, Teams, etc.)
- Automated identity lifecycles (joiner, mover, leaver)
- API-based integration

Streamlined Approvals

- Automatic non-critical access approvals
- Risk insights
- In-line collaboration
- Escalation and delegation

Governance & Management

- IGA, PAM, third-party, application access and data access
- Complete SoD management
- Ownership and succession
- AD and service account management
- Continuous compliance

Certification & Compliance

- Business process workflows
- Intelligent certification campaigns
- Application, entitlement owner, service account, and role owner micro-certification
- Consolidated and actionable reporting
