SOLUTION GUIDE

Just-in-Time Access

Secure High-Risk Access to App, Just-in-Time!

In a world where organizations rely on more apps than ever, securing app access has become the new challenge. Applying Just-in-Time access to every app helps remove unnecessary standing privileges, lock down high-risk access, and keep productivity flowing. Right access, right time — no compromise.

Enable seamless Just-in-Time (JIT) access, eliminating high-risk access while keeping users productive.

Bridge the Gap in Securing App Access

High-risk access isn't just limited to traditional admin users. With the growing adoption of collaboration and cloud-based applications, business users, developers, contractors, and partners often need elevated access to critical applications. These access scenarios are frequently loosely governed, increasing the organization's attack surface. Just-in-Time Access

(JIT Access) helps mitigate this risk by enforcing seamless time-bound access controls—granting right-sized access only when needed.

Gain Visibility into Who Has High-risk Access, to What, and When

JIT Access helps uncover access to high-risk entitlements and shared account credentials across applications like SAP, HR applications, ERP solutions. Gain centralized visibility into all discovered risks on a single page-making it easier to manage, remediate, and secure elevated access.

How Just-in-Time Access address Gaps Just-in-Time Access Lacks features to effectively identify and control Just-in-Time elevated access from business users to apps Helps organizations address gaps that may exist in their current solutions Mainly focuses on securing access to infrastructure or privileged accounts, and may be complex to implement effectively at the app level

Capabilities:

High-risk access discovery

- Users with access to high-risk entitlements
- Shared accounts with access to high-risk entitlements

Risky access remediation

- Replacement of high-risk access with JIT access
- Auto-rotation of shared credentials
- Audit of app access requests

Seamless JIT Access workflow

- Seamless temporary role elevation request
- Self-service check out for users with MFA control
- Time-bound access to highrisk shared credentials

Policy based access control

 User access restriction based on access policies

Effortlessly Remediate Detected App Access Risks

The Saviynt Identity Cloud makes it easy to enable JIT access across any application connected to the Identity Cloud. With just a few clicks, high-risk roles are activated only when needed, and shared account credentials stay securely vaulted when not in use — minimizing exposure and strengthening security.

Provide Effortless JIT Access for Apps By Design

JIT Access can eliminate the need for manual rule creation by enabling policy-based access controls. It streamlines the elevated access request-to-approval process — saving time for administrators and keeping end-users productive.

Achieve Zero Standing Access

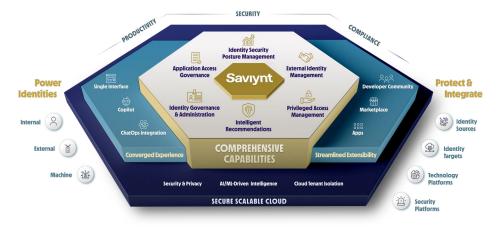

JIT Access replaces always-on access with time-bound access, strengthening security and simplifying compliance with audit-ready logs.

Key Benefits:

- Provide comprehensive visibility for app access risk
- Discover users and shared accounts with access to highrisk entitlements
- Apply Just-in-Access with just a few clicks
- Enable streamlined Just-in-Time access request-toapproval process

The Identity Cloud combines core identity security capabilities in a single platform that enhances security while reducing costs and management headaches.

ABOUT SAVIYNT

Saviynt's Identity Cloud is the leading identity governance platform. It helps enterprise customers accelerate modern cloud initiatives and solve the toughest security and compliance challenges in record time. Saviynt converges IGA, granular application access, cloud security, and privileged access into the industry's only enterprise-grade SaaS solution.
